

converter

Topics:

- variables
- basic data types
- input function
- print function
- logical operators
- conditions

Task description:

- This program will convert many types of data from one type to another.
- The conversions you need to support are: temp (F <-> C), speed (MPH <-> KPH), weight (kg <-> stone <-> lbs).
- use the input function to ask for 2 pieces of information: the type of conversion, source value.
- convert the source value, save it in a variable, and print it to the screen.
