Gardening simulator

Topics:

- variables
- basic data types
- math module
- conditions
- logical operators
- input function

Task description:

- create variables describing 3 plants.
- for each plant - create 3 variables describing do they like sun or rain, how much water do they need, and do they like wind or not.
- ask for the user to describe the weather today - sun or clouds, precipitation number, and wind or not.
- for each condition - print what plant likes this condition.
- add a variable for each plant describing the amount of snow that will kill them.
- ask the user (in addition to the other conditions) for the snow info.
- print which plant is dead due to the snow.
